# SAPPHIRE

A development team was selected from five industry experts-based at TLC in Southern Florida set out to create a new undercounter line of ice and refrigeration appliances ***designed and engineered in North America*** using the ***best components from around the world*** to then be ***manufactured by a TLC factory*** from the ground up.

The team quickly identified that the industry didn't need just another undercounter product it needed new design that installs like a cabinet, is flexible in use and accessible to all.

Sapphire was created to be a leader in the industry not just another brand extension, but a singular line that was entirely focused on what it takes to be the best in the undercounter space. ***Designing, engineering and manufacturing products in their own factory.***

# SAPPHIRE

Building the tooling and designing the production line from scratch to manufacture all the Sapphire products was put in place at the newly acquired Orient Factory in 2016.

Orient was a factory building industry leading commercial ice machines from 25lbs up to 1000lbs a day, TLC was its largest customer and 93% of production was for the NA market.

The factory is over 200,000 SQFT of state-of-the-art refrigeration manufacturing and testing capable of meeting or exceeding all regulatory standards. Orient commercial manufacturing capabilities would be the perfect fit for a new North American undercounter refrigeration and ice machine line. Sapphire production lines were put in place and the first units were produced in 2020.
